

Work only the *odd* numbered problems unless otherwise indicated.  
 Turn this completed sheet in with the homework on the day of the exam.

## Math 121 - Homework

---

Your success in calculus is strongly related to the amount of homework you do. As with anything you do, the more you practice, the better you get. Homework is the practice for a mathematics class.

**Homework is not optional in this course. It is part of your grade.**

There are 494 assigned problems in 45 sections giving about 11 problems per section. You get one point for every five problems worked correctly, but because of rounding and the distribution of problems within each chapter, the homework is worth 100 points.

### Grading the Homework

Grade your own homework according to the answers in the back of the textbook. If you miss something, please correct it and understand why you missed it. The number of problems correct is for the final work submitted on the day of the exam, not the number you originally got correct. In other words, if you miss it and then correct it, it's considered correct.

Write the number of correct problems as a fraction at the top of the first page of each section of homework. Also record the number of problems correct in the blank in front of each section of the homework assignment sheet. Before the test, add the points together for the chapter and record that total in the blank on the homework assignment sheet. Then divide the total for the chapter by 5 and round it to the nearest whole number. Write this number in the double box on the homework assignment sheet.

Here's an example so you can understand.

Section	1.1	1.2	1.3	1.4	1.5	Trig	Total
#	4	4	14	4	9	20	55
Correct	4	4	13	4	9	17	51

You got 51 out of 55 questions correct for chapter 1. Divide 51 by 5 to get 10.2. Round this to 10 and that is how many points you got for the chapter 1 homework. Write 10 in the double box on the assignment sheet.

Turn in the homework and this point total sheet at the beginning of each exam.

I suggest that you copy the original problem down where possible. Also show plenty of work. The final exam is open notebook, and it will be beneficial to you at that time to have the original problem written down should some of the problems appear on the test.
